

Notes - 3/6

Monday, March 4, 2013 5:22 PM

Agenda:

- Imports used only for types still make you a module

```
declare module M1 {  
    export interface I1 {  
        foo(): string;  
    }  
}  
  
declare module "M2" {  
    export interface I2 {  
        bar(): string;  
    }  
}  
  
var x: M1.I1; // <= OK: Can use  
types exported from internal  
modules  
var y: "M2".I2; // <= ERROR:  
Expected type name on "M2"
```
