

## Notes - 5/3

---

Thursday, May 2, 2013 3:53 PM

[In 41/4541 at 10:00 today.]

### Agenda:

- Spec and implementation updates
  - Enums are in
  - Another pass generics work
  - Next: export=, clodule/fundule
- Modules – discuss proposed answers on each of current open questions:
  - Align with ES6 syntax [proposal: **no**]
  - Fix codegen bugs – corner cases that generate bad code [proposal: **yes**]
  - Fix brittleness of internal module aliasing [proposal: **no**]

```
module Bar {
  import Y = Foo.Y; // var Y = Foo.Y;
}
module Foo {
  export module Y {
    export var x = 34;
  }
}
```

- Enable importing members from modules [proposal: **yes**]
- Allow re-export [proposal: **yes**]
- Remove 'module' from import syntax since it no longer makes sense with export= [proposal: **yes**]
- Enable –out for external modules [proposal: **discuss**]

- Protected (finalize decision from last meeting)
- [No implicit 'any'](#)
- Other (likely not happening for 1.0) items:
  - Recursive type check improvements
    - Extending 'declare var'
    - Remaining class alignment deltas:
      - [Class expressions](#)
      - Extends expressions
      - "extends null"
