

Notes - 7/29

Monday, July 29, 2013 9:10 AM

[In 18/1015 at 11:00 today.]

Agenda:

- Update on 0.9.1 features:
 - 'export import' and import aliasing
 - typeof
 - noImplicitAny
 - Perf!
- TC39 update
- Topics:
 - Concern about allowing string indexing on any object
 - Bug: remove the indexer in Object.
 - Decision: noImplicitAny should error on fallback to default indexing
 - Implication: You can index any object
 - 'typeof' and .d.ts generation
 - Rules for visibility
 - 'import'
 - Should instanceof RHS really be requiring callable/constructable
 - Should restriction that 'export =' only refer to something defined in the module be loosened?
 - Others?
- Future:
 - 'export default' in ES6 modules
