

## Notes - 10/14

---

Thursday, October 27, 2011 4:05 PM

Focus on spec, compiler cleanliness for next month

Luke to send out spec structure proposal

Notes for implementation:

Questions:

- Are parens required for class definitions?

Function/var members:

- Concerns with static rules for determining whether lifted
- Decision:
  - Property/function declare property/method
  - Vars and parameters are lift as needed
    - As lexically captured

Private:

- Compilation

```
Class Foo {  
  property  
  var  
  function foo() {  
  
  }  
}
```
