Notes - 10/7: SENT

Friday, October 14, 2011 8:44 AM

```
//module Foo {
     interface A {
        foo(): number;
          foo(): {z:number;};
     var x = (null as A).foo
//var w = x();
     interface A1 { clone(): A1; }
interface B1 : A1 { clone(): B1; }
     // Every member must have a unique signature
     // The same signature allows specialization
// But error if you then don't subtype
     var ww = null as A;
ww.foo = "hello";
     interface X {}
     interface A3 { clone(): A3; clone(s: string): A3; }
      class C : A { public clone(?s: string) : A3; }
     // const properties - no, and methods should be non-const as well for now
     interface I1 { x : A };
interface I2 { x : B };
     interface I : I1, I2 {};
     // RULE: Overloads must all have the same type
     // RULE: Within a single interface, all members must
     class C() {
  public foo();
  public foo(s: string);
 //}
 //module Foo2 {
 // class A() {
// public clone(): A;
         public clone(x: Context): A;
public clone(x: number): A;
implementation clone(x?:any): A{
         }
//
//
//
//
//
     }
     class C() : A() {
  public clone(): C;
         public clone(x: Context): C;
public clone(x: number): C;
          implementation clone(x?:any): C {
     }
 //
//}
 //RULE:
module Foo4 {
     // calls, properties, methods
interface A {
        (): A;
(x: string): A;
x: A;
         foo(x: string): A;
     // calls, properties
interface A {
        (): A;
(x: string): A;
          foo: { (): A; (x:string): A; };
```

```
// // call, properties
// // call, properties
// interface A {
// () | (x: string) : A;
// x : A;
// foo: { () | (x: string): A; }
// interface B {
// x : B;
// }
// // x : B;
// }
     var x = "" + 5;
// We want to avoid having the type of something change the meaning of it // subtyping determines "treat as" // all conversions are based on subtyping
 // Add workitem
module Foo45 {
     interface IArray {
   [x: number]: _element;
}
    interface IDictionary {
   [x: string]: any;
}
     interface I1 {
   [x: number]: string;
   [y: string]: string;
```

}

Overloading/i

interfac foo(): | interfac foo():

var b : E

}

b.foo
