Notes - 6/7

Friday, June 7, 2013   12:53 PM

[In 41/3731 at 1:00 today.]

Agenda:
- Implementation & spec update
    - Language service robustness
    - Spec:
        - Pending:
            - Recursive generic types
            - Intro update
- 0.9.0 items:
    - Modules as types

```
class Geometry {  // this is a type and a variable
}
module Geometry {  // this is a container (and is it also a type??)
 export class Point extends Geometry {
 }
}
```

Proposal:
- typeof A.B.C
- Only allow dotted names
- 0.9.1

    - Enum merging semantics
- Stay with what's in the spec

    - Enum

- Can't ever cross cast enums

    - 'this' in initializers
- Good.
- 0.9.1

- 0.9.1 pendings on the assumed-cut-list, confirm these:
    - Clinterfaces
        - Okay to push to 1.1
    - Protected
        - Okay to push to 1.1
    - Aliasing import/export

```
import A = require('foo')
Import X = A.B.C
```
- Still on the table

    - Multi-file modules
        - tsc (a.ts b.ts c.ts) d.ts e.ts
        - Okay to push to 1.1
        - Want to document some of the workarounds (at elast the leaf workaround like Monaco uses)

Luke
