Subject: Notes from Monday conversation
Importance: Low

We agreed on the following statements:
1. Files are modules
2. Every file has a unique namespaces
3. Import means co-mingling
4. URL -> file -> implicitly modules
5. Module is a type
6. Strada will have some form of module instantiation and re-rooting
7. Generate code using a -module flag

Open questions:
- File as module denotation in type position
  - "foo"
  - module("foo")
  - <"foo">
- Import/comingle syntax
- Instantiation/re-root syntax
- URL resolution
- Compiler flags

Luke
