Notes - 8/5: SENT

Friday, August 05, 2011   6:17 PM

Implementation:
- _element

Public/private:
- Fine, might like something shorter

Generic:
- Special cased for IArray
- Maybe just interfaces?
    - Interfaces are an illusion – generics on interfaces
    - IList means IList<any>
- "Data"
- Why not classes?
    - Classes the concrete thing
- Concerning that you need both List and IList

Lambda syntax:
- Lambda could mean type inference
- Only in the case of overloading
- Unambiguous context pushes types into lambda

Language service:
-

TODOs:
- Function shorthand syntax
-

Colorization would be great

Subject: Strada Design Meeting Agenda - 8/5/2011

Agenda:
- Update on implementation from Steve
- Expression typing
- Backlog:
    - Extern and retrofitting types on global code
    - Top level scope?
    - Global module
    - Promises typing
    - "await"
    - Enums
    - Foreach
    - Any -> number (what gets emitted?)
- Anything else?
